

Erfan Sedighehsani

Senior DevOps / Site Reliability Engineer

✉ erfanehsani1992@gmail.com ☎ +989125458845 📍 Tehran, Iran 🔗 LinkedIn

PROFILE

Senior DevOps / Site Reliability Engineer with 5+ years of experience building and operating production Kubernetes platforms, cloud infrastructure, CI/ CD pipelines, and observability systems. Strong hands-on background with AWS, EKS, RDS, Terraform, Ansible, GitLab CI, Prometheus, Grafana, ELK/ EFK, and high-availability Linux infrastructure. Experienced in financial-grade and large-scale platforms, including multi-datacenter Kubernetes, blockchain infrastructure, GitOps workflows, cost optimization, and incident-focused operations.

SKILLS

Cloud & Infrastructure: AWS, RDS, EC2, S3, IAM, Lambda, CloudFront, , Hetzner Cloud, Linux, bare-metal infrastructure

Kubernetes & Containers: Kubernetes, EKS, ECS, RKE2, Kubespray, Docker, Helm, Rook-Ceph

Infrastructure as Code & Automation: Terraform, Ansible, Packer, SaltStack

CI/CD & GitOps: GitLab CI, GitHub Actions, Jenkins, FluxCD, Git, SonarQube

Monitoring & Observability: Prometheus, Grafana, Alertmanager, Zabbix, ELK/ ECK, CloudWatch, Custom Exporters

Networking & High Availability: Cilium, HAProxy, NGINX, Keepalived, AWS WAF, DNS, Bind, DNSmasq, Unbound

Databases: PostgreSQL, Oracle, T-SQL, AWS RDS, ClickHouse

Scripting: Bash, Python

Blockchain Infrastructure: Hyperledger Besu, Hyperledger Fabric, Go-Ethereum

PROFESSIONAL EXPERIENCE

DevOps Engineer

08/2025 – Present | Tehran, Iran

Informatics Services Corporation (ISC)

- Designed and operated production RKE2 Kubernetes clusters for a nationwide Central Bank Digital Currency platform handling critical financial workloads.
- Built multi-datacenter Kubernetes infrastructure across banking environments, improving platform resilience and removing single points of failure.
- Implemented Rook-Ceph storage for Kubernetes and blockchain workloads, providing resilient persistent storage for stateful services.
- Built high-availability traffic layers using HAProxy, Keepalived, and NGINX for fault-tolerant service routing.
- Implemented observability and logging with Prometheus, Grafana, Zabbix, and EFK, including high-throughput log pipelines for large-scale production events.
- Supported production operations, troubleshooting, reliability improvements, and infrastructure hardening for financial grade services.

DevOps Engineer

03/2024 – 08/2025 | Amberg, Germany

youki GmbH. Part-time (Remote Contract)

- Managed AWS infrastructure with Terraform, including EKS, RDS, EC2, S3, IAM, CloudWatch, Lambda, CloudFront, ECS, and related networking components.
- Deployed and operated Kubernetes clusters on AWS EKS and on-prem environments, maintaining 99.9% uptime through autoscaling and reliability improvements.
- Reduced AWS costs by about 47%, from €17K to €9K per month, while scaling the platform from 3 to 8 applications.
- Improved delivery speed by 40% by building CI/ CD pipelines with GitHub Actions and GitOps workflows using FluxCD.
- Built and deployed AI/ ML workloads on AWS SageMaker and EKS, including automated training and deployment pipelines.
- Deployed blockchain infrastructure on AWS EKS using Hyperledger Besu and Go-Ethereum for secure distributed ledger workloads.
- Implemented AWS WAF protections with custom rules, CloudWatch logging, and Athena-based security analysis.

Site Reliability Engineer

02/2024 – 12/2024 | Tehran, Iran

Digikala

- Migrated Prometheus and Grafana workloads to Kubernetes, monitoring 10,000+ targets with zero downtime.

- Improved incident investigation and bottleneck detection speed by around 50% through better dashboards, alerting, and monitoring coverage.
- Automated Linux server configuration and operational workflows using Ansible and SaltStack, reducing configuration drift.
- Developed custom Python and Bash exporters for application-specific and infrastructure-specific metrics.
- Supported the reliability of a large-scale e-commerce platform through Linux administration, VPN services, production monitoring, and incident response.
- Mentored junior SREs on reliability practices, observability, Linux operations, and incident response

DevOps Engineer

02/2023 – 02/2024 | Tehran, Iran

Dotis Arian Qeshm Co. (Dotin)

- Designed, deployed, and managed Kubernetes clusters with Kubespray for production application environments.
- Implemented RBAC, deployment strategies, and operational standards to improve Kubernetes security and reliability.
- Containerized applications with Docker and improved portability across development and production environments.
- Built Jenkins CI/ CD pipelines to reduce deployment errors and standardize release workflows.
- Implemented monitoring and logging with Prometheus, Grafana, and ELK to improve service visibility and troubleshooting.
- Supported scalable application deployments for banking and enterprise workloads.

DevOps Monitoring Specialist

04/2021 – 02/2023 | Tehran, Iran

Digikala

- Promoted from Monitoring Engineer to Monitoring Specialist while supporting 24/7 production operations and on-call shifts.
- Re-architected the observability stack using Prometheus, Grafana, ELK, Docker Compose, Ansible, and SaltStack.
- Built Grafana dashboards for engineering and business teams to monitor critical website, infrastructure, and application metrics.
- Tuned Alertmanager rules and Slack notifications to reduce noise and make production alerts more actionable.
- Led post-incident analysis and prepared RCA reports for production incidents.
- Improved monitoring coverage for high-traffic e-commerce systems and helped teams detect issues earlier.

LANGUAGES

English

Professional working proficiency

German

A2

PROJECTS

Node.js Web Application Deployment (Freelance)

- Deployed a Dockerized Node.js application behind NGINX reverse proxy using Docker Compose.
- Built a GitHub Actions pipeline to automate build and release workflows.

Web Application Firewall Hardening with AWS WAF (youki GmbH)

- Designed and implemented AWS WAF protections with custom rule groups and OWASP Top 10 coverage for public-facing services.
- Tuned WAF rules to reduce false positives while blocking common attack patterns such as SQL injection and XSS.
- Integrated WAF logs with CloudWatch and Athena for security monitoring and investigation.

VPN setup and management (Freelance)

- Delivered multiple **VPN setup and management projects** for clients, including secure site-to-site tunnels and remote access solutions.
- Assisted startups with **Linux server deployments**, CI/CD automation, and migration of workloads to cloud providers (AWS & GCP).

CERTIFICATIONS & TRAINING

AWS Certified Solutions Architect - Associate

Amazon Web Services

DevOps Administration

Sematec

CKA Certification Course

KodeKloud
